

Fiber optic cable and router connection pricing

Summary of Content

Connecting a router with a fiber optic cable typically costs between \$100 and \$7,000, depending on installation complexity, cable length, and equipment.

Installation Costs

For residential fiber optic installation, the total cost can vary widely: most homeowners pay between \$1,500 and \$4,500, with some projects reaching up to \$7,000 . Factors influencing cost include:

- Cable length: Longer runs increase material and labor costs, typically \$1 to \$12 per linear foot .
- Installation type: Underground or trenching installations are more expensive than aerial or indoor-only runs due to excavation and conduit requirements .
- Labor and permits: Professional installation ensures proper termination and compliance with building codes, with permit fees ranging from \$50 to \$500 .
- Property layout: Multi-story homes, long driveways, or complex routes increase labor and material needs . Smaller projects, such as connecting a single room or home office, may cost \$100 to \$500 if the fiber line is already nearby, covering technician time, materials, and service activation .

Equipment Costs

- Optical Network Terminal (ONT): Converts fiber signals to electrical signals for your router; often included in installation fees or monthly ISP service .
