

Fiber optic cable and router wiring

Summary of Content

Connecting a fiber optic internet line to your router requires an Optical Network Terminal (ONT), proper fiber and Ethernet cables, and correct port configuration to ensure high-speed connectivity.

Required Components

- Optical Network Terminal (ONT): Converts incoming fiber optic light signals into electrical signals your router can use, typically provided by your ISP .
- Fiber Optic Cable: Usually single-mode with SC/APC or SC/UPC connectors, connecting the wall outlet to the ONT .
- Ethernet Cable: Cat6a or higher recommended to link the ONT to the router's WAN port for optimal speeds .
- Fiber-Ready Router: Ensure your router supports gigabit or multi-gigabit speeds and has a WAN port or SFP slot compatible with fiber input .

Step-by-Step Wiring Process

- Locate the Fiber Outlet: Identify where the ISP's fiber line enters your home or office .
- Connect Fiber to ONT: Remove protective caps and carefully insert the fiber cable into the ONT's optical port, ensuring a secure click without bending the cable .
- Power the ONT: Plug in the ONT's power adapter and wait 2-5 minutes for the status lights to stabilize .
