

Fiber optic cable reserved in the apartment

Summary of Content

Installing fiber optic internet in an apartment requires landlord approval, coordination with the building management, and understanding whether your unit supports FTTP or FTTB connections.

Types of Fiber Connections

- FTTP (Fiber to the Premises): Fiber runs directly to your apartment, providing the fastest and most reliable speeds with minimal interference .
- FTTB (Fiber to the Building): A single fiber line reaches the building's main communication point, and existing internal wiring distributes the connection to individual units. Speeds may vary depending on wiring quality and shared bandwidth .

Landlord and Building Approval

Before installation, you typically need written permission from the landlord or property management, especially if structural changes are required, such as running new cables or mounting an ONT (Optical Network Terminal) inside your apartment . Presenting a non-invasive installation plan—using surface raceways, clean cable routes, and placing the ONT near a power outlet—can increase approval chances . Collective tenant requests can also encourage building owners to approve installation at minimal cost .
