

Fiber optic connection is above the router

Overview

The fiber optic cable does not plug directly into a standard home router because the signal type must be translated. The fiber line terminates at the Optical Network Terminal (ONT), which is typically supplied and installed by the internet service provider. In this guide, we'll walk you through how to. Fiber optic technology represents a revolutionary advancement in connectivity, transmitting data via pulses of light through thin strands of glass or plastic fibers. This method enables significantly faster speeds and greater stability compared to traditional copper-based connections. Check availability first by contacting your internet service provider or visiting their website—fiber now passes over 76 million. If you're looking to understand how to connect fiber optic cable to router, you've come to the right place. Unlike traditional copper-based cable or DSL, fiber offers significantly higher speeds, lower latency, and greater reliability.
