

Fiberglass cable tray branch

Overview

FRP channel cable tray is commonly used for lighter cable runs, branch routing and installations where a compact support profile is preferred. It offers a clean, corrosion-resistant solution for control cables, small power bundles and indoor or sheltered industrial routes. It is manufactured from fiber reinforced polyester or vinyl ester resin so it has high corrosion resistance, long. What / Why — FRP cable trays are composite cable management systems designed to support, route and protect electrical and instrumentation cables in corrosive, wet or outdoor environments. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed the enclosure. After the dipping process, the surplus zinc is blown off and one obtains an extra passivating coat (an ultra-thin protective coat) to prevent oxidation of the zinc coating (white rust). The coating thickness is usually expressed in g/m².
