

Four-way pigtail channel

Summary of Content

A four-way pigtail channel is a wiring connector that allows four electrical circuits to be connected or split, commonly used in RVs, trailers, and automotive lighting systems.

Overview

A four-way pigtail is essentially a short wiring harness with a connector on one end and four individual wires (leads) on the other. It is used to connect multiple electrical components to a single power source or to interface with an existing wiring harness. These connectors are widely used in RV steps, trailer lights, propane systems, and off-road lighting setups .

Types and Applications

- RV and Trailer Wiring Pigtails
- Used to connect RV electric steps, motors, and control units to the vehicle's power system .
- Often includes a 4-way plug that fits into the existing wiring harness, allowing easy installation or replacement.
- Can also connect propane tanks to regulators in split-tank systems, with safety features like check valves and thermal shut-offs .
- Deutsch DT Series 4-Way Connectors
- Rectangular connectors with silicone rubber seals, rated for 13 amps continuous .
- Designed for harsh environments, providing a weatherproof and vibration-resistant connection.
