

Galvanized cable trays for lighting cables

Summary of Content

Galvanized cable trays provide a durable, corrosion-resistant solution for safely routing and supporting lighting cables in various environments.

Overview

Galvanized cable trays are metal support systems designed to organize, protect, and route electrical and lighting cables. They are made from electro zinc-plated or hot-dip galvanized steel, which ensures corrosion resistance and long-term durability, making them suitable for both indoor and outdoor applications . These trays are ideal for lighting cables because they prevent sagging, maintain proper spacing, and allow for easy future modifications or additions .

Types of Galvanized Cable Trays

- **Wire Mesh (Basket) Trays:** Open-grid design allows air circulation, prevents dust accumulation, and supports multiple small cables like lighting circuits or fiber optics. Examples include Hi-Wire™ and Cobia® wire mesh trays, available in widths from 4" to 12" .
- **Ladder Trays:** Feature side rails with rungs, suitable for heavier cables or long runs. They provide excellent ventilation and easy access for cable maintenance .
- **Solid or Trough Trays:** Fully enclosed or partially covered trays for environments requiring extra protection from dust, moisture, or mechanical damage .

Key Features

- **Corrosion Resistance:** Galvanized coating protects against humidity, chemicals, and environmental exposure .
