

Georgia Electrical Distribution Box Company

Summary of Content

Georgia's electrical distribution relies on a vast network of substations, transformers, and power lines managed by Georgia Power and local EMCs.

Overview of Distribution Infrastructure

Electricity in Georgia is delivered through a sophisticated system called the grid, which includes generating plants, high-voltage transmission lines, substations, and distribution lines that bring power to homes and businesses. Substations act as the key “distribution boxes,” converting high-voltage electricity from transmission lines to lower voltages suitable for local use. Transformers mounted on poles or placed on the ground further reduce voltage to levels usable in homes and businesses, typically between 120 and 480 volts.

Key Players

- **Georgia Power:** Serves 2.7 million customers and operates a network of transmission and distribution lines, substations, and transformers across the state.
- **Electric Membership Cooperatives (EMCs):** Member-owned, not-for-profit utilities serving about 5 million residents and covering 73% of Georgia's land area. EMCs operate the largest distribution network in the state, with over 200,400 miles of power lines.
- **Other Distribution Companies:** Companies like Flip Electronics, Volt Power, and Horizon Construction provide specialized electrical distribution services, including overhead and underground utility services.
