

Georgian Fiber Optic Connectors

Summary of Content

Fiber optic connectors in Georgia include a variety of types for single-mode and multimode applications, available from local suppliers and used in both terrestrial and submarine networks.

Types of Fiber Optic Connectors

Fiber optic connectors are mechanical devices that align and join optical fibers, allowing light to pass with minimal loss while enabling easy connection and disconnection. Common connector types include:

- SC (Subscriber Connector): Square-shaped, push-pull coupling, widely used in FTTH and data centers, with SC/APC variants for low return loss applications .
- LC (Lucent Connector): Miniaturized 1.25mm ferrule, ideal for high-density environments, commonly used in modern data centers .
- ST (Straight Tip): Bayonet-style twist-lock, used in legacy systems and industrial networks .
- FC (Ferrule Connector): Threaded coupling for high-vibration environments, precise alignment, gradually replaced by LC and SC in telecom .
- FASTConnect® Mechanical Connectors: Field-installable, factory pre-polished connectors for single-mode or multimode fibers, supporting LC, ST, and SC types, designed for quick, tool-less termination in enterprise, FTTx, and LAN applications .

Suppliers in Georgia (U.S.)

Several companies in Georgia provide fiber optic connectors and related services:
