

Ground-mounted electrical distribution box

Summary of Content

A ground-mounted electrical distribution box is a freestanding enclosure that houses electrical circuits and controls, designed for outdoor or floor-level installations to safely distribute power in commercial, industrial, or public spaces.

Overview

Ground-mounted distribution boxes are enclosures installed at or near ground level to provide electrical power distribution for various applications, including street markets, car parks, airfields, aircraft hangars, and industrial sites . They are designed to protect electrical circuits and equipment from environmental hazards such as moisture, dirt, and physical impact, while allowing safe access for operation and maintenance .

Types and Features

- **Standard Duty and Heavy Duty Enclosures:** These vary in robustness depending on the environment and load requirements. Heavy-duty versions are suitable for high-traffic or harsh outdoor conditions .
- **Lid Arrangements:** Options include hinged chequer plate lids or lift-out lids, which can remain closed even when plugs are inserted, reducing trip hazards .
- **Socket Outlet Assemblies:** Many ground-mounted boxes come with integrated socket outlets and protection devices, allowing direct connection of equipment .
- **Environmental Protection:** Enclosures often meet NEMA Type 4 or 4X standards, providing resistance to water, dust, and corrosion .
