

Hidden Electrical Distribution Box

Summary of Content

A distribution box (DB box) can be effectively concealed using cabinets, artwork, mirrors, or decorative panels while maintaining safety and accessibility.

Key Considerations

When hiding a DB box, safety and accessibility are paramount. The National Electrical Code (NEC) mandates a minimum working space in front of the panel: at least 36 inches deep, 30 inches wide (or the full width of the panel), and 6 feet 6 inches high. Any cover must be non-permanent and instantly removable without tools to allow emergency access or maintenance .

Popular Concealment Methods

1. Built-in Cabinets or Storage Units

- Construct a shallow cabinet or cupboard around the DB box to blend with existing furniture or wall decor.
- Paint or finish the cabinet to match the room's aesthetic.
- In small apartments, floor-to-ceiling storage units can hide the box while providing extra storage .

2. Hinged Artwork or Mirrors

- Mount a painting, framed photo, or mirror on hinges so it swings open like a door.
- Use lightweight materials and magnetic catches or small latches to keep the cover flush against the wall.
- This method ensures tool-less access and adds a decorative element to the room .

3. Decorative Panels or Screens
