

High-density cabinet-type intelligent in-stock units

Summary of Content

High-density intelligent cabinets combine AI-ready rack designs with advanced power distribution units (PDUs) to support compute-heavy workloads efficiently and reliably.

Cabinet Design and Specifications

High-density cabinets are engineered to accommodate AI, HPC, and machine learning servers, which are heavier and larger than traditional 1U or 2U servers. Modern AI-ready cabinets typically feature:

- Height: 47U to 52U
- Width: 800 mm (31 inches)
- Depth: 1000–1400 mm (39–55 inches), especially for liquid-cooled systems
- Weight Capacity: Up to 5,000 pounds of static load to support fully loaded AI racks
- Cooling Compatibility: Designed for direct-to-chip liquid cooling or enhanced airflow management
- Flexibility: Extra depth and width allow future expansion without replacing the cabinet infrastructure

Intelligent Power Distribution Units (iPDUs)

High-density cabinets are paired with intelligent PDUs to manage power efficiently and ensure uptime:
