

High-density fiber optic corrugated pipe new model in stock

Summary of Content

Upgraded HDPE corrugated fiber optic pipes with multiple inner ducts, high flexibility, and long service life are available in stock.

Product Overview

High-density polyethylene (HDPE) corrugated pipes, often referred to as C.O.D. or Corrugated Optic Ducts, are designed for fiber optic cable protection and installation. These upgraded versions feature multiple inner ducts (3 to 9) built into a single outer conduit, allowing for simultaneous cable deployment without additional inner duct insertion, which significantly reduces installation time and labor costs. Both the inner and outer ducts are made of HDPE, providing high flexibility, impact resistance, and long-term durability.

Key Features

- **Material:** High-density polyethylene (PE 4710), compliant with ASTM F-2160 standards.
- **Flexibility:** Can be coiled in long lengths (up to 500-1000 meters depending on diameter and inner ducts), enabling quick installation and easy handling.
- **Durability:** Resistant to abrasion, impact, weather, and UV exposure; lifespan exceeds 50 years.
- **Low Friction:** Inner ducts are designed with low friction surfaces, reducing cable stress and facilitating smooth fiber pulls.
