

Home fiber optic cable connected to wireless router

Summary of Content

You cannot connect a fiber optic cable directly to a standard wireless router; you need an Optical Network Terminal (ONT) or fiber modem to convert the signal before connecting to your router.

Required Equipment

To set up a fiber optic connection at home, you will need:

- Fiber Optic Cable: Typically single-mode with SC/APC or SC/UPC connectors, provided by your ISP .
- Optical Network Terminal (ONT) or Fiber Modem: Converts the optical signal into an electrical signal that your router can use .
- Wireless Router: Ensure it has a WAN or Internet port compatible with Ethernet input .
- Ethernet Cable: Usually Cat5e or Cat6 to connect the ONT to the router .
- Power Supplies: For both the ONT and the router .

Step-by-Step Connection

- Install the ONT: Locate the fiber wall outlet where the ISP's fiber line enters your home. Connect the fiber optic cable from the wall to the ONT's optical port. Handle the fiber connector carefully to avoid dirt or damage .
