

How much does a 19-inch sheet metal chassis from Sudan cost

Summary of Content

A 19-inch sheet metal chassis typically costs between \$50 and \$300, depending on material, thickness, and fabrication complexity.

Factors Affecting Cost

- **Material Type:** Steel is generally the most affordable, while aluminum or stainless steel increases the price due to higher material costs and fabrication difficulty .
- **Sheet Thickness:** Thicker sheets provide more durability but increase both material weight and cost .
- **Fabrication Complexity:** Simple U-shaped chassis are cheaper, whereas multi-part assemblies with internal partitions, precise tolerances, or EMI/RF shielding are more expensive .
- **Surface Finishing:** Powder coating, anodizing, or plating adds to the cost but improves durability and aesthetics .
- **Quantity:** Prototyping a single unit is more expensive per unit than low-volume production due to setup costs .

Estimated Price Range

- Basic steel 19-inch chassis: \$50-\$100
- Aluminum or stainless steel chassis with moderate fabrication: \$150-\$250
