

How much does a micro-module cost in Malawi

Summary of Content

A typical solar microgrid module in Malawi can cost around 45,000,000 MWK (~\$45,000 USD) for a 30 kW system with 100 kWh battery storage.

Cost Overview

The price of a micro-module in Malawi depends on system size, energy storage, location, and installation method. For example, a community-scale solar microgrid in Salima district designed to supply 100 kWh/day with 30 kW solar panels, 100 kWh lithium batteries, and a 30 kW inverter has a total cost of approximately 45,000,000 MWK, with a levelized cost of electricity (LCOE) of about 150 MWK/kWh over 15 years. Smaller or institutional systems, such as a school microgrid in Mzimba district powering 20 classrooms and a computer lab with daily energy needs of 80 kWh, would have slightly lower total costs but follow similar component pricing and LCOE calculations. Costs can vary if systems are self-installed versus professionally installed, or if additional infrastructure like smart meters and low-voltage distribution networks is included.

Factors Affecting Cost

- **System Size:** Larger systems with higher kW capacity and battery storage increase upfront costs but reduce LCOE per kWh.
- **Location:** Remote areas may incur higher transport and installation costs.
- **Components:** Quality of solar panels, inverters, and batteries significantly affects total cost.
