

How much does single-mode fiber typically cost

Summary of Content

Single-mode fiber optic cables typically cost between \$0.10 and \$7.00 per foot, depending on type, strand count, and features.

Pricing Overview

The cost of single-mode fiber varies widely based on construction, application, and additional features. For the cable itself, single-mode fiber generally ranges from \$0.10 to \$0.50 per foot for standard indoor or outdoor cables, while multimode fiber is slightly more expensive per foot. For bulk purchases, prices can range from \$2.00 to \$7.00 per foot, especially for pre-terminated assemblies or armored cables. Retail prices for smaller quantities may be higher, typically \$1 to \$6 per foot depending on fiber count and jacket construction.

Factors Affecting Cost

- **Cable Type and Strand Count:** Higher strand counts increase cost proportionally. For example, a 12-strand single-mode cable may cost around \$0.50 per foot, while a 24-strand cable can reach \$1.00 per foot.
- **Construction and Rating:** Indoor riser-rated cables are cheaper than plenum-rated cables. Armored or direct-burial cables designed for harsh environments can cost \$0.50 to \$5 per foot.
- **Application:** Indoor, outdoor, or underground installations affect pricing. Underground or long-haul installations are more expensive than aerial or short indoor runs.
