

How to adjust the router after switching to fiber optic internet

Summary of Content

To switch or set up a router for fiber optic internet, connect your router to the Optical Network Terminal (ONT) via Ethernet, configure the router with your ISP credentials, and ensure proper placement and security settings.

Step 1: Understand the Fiber Setup

Fiber internet requires an Optical Network Terminal (ONT), which converts the fiber optic light signals into standard electrical signals that your router can use. The ONT is usually installed by your ISP near the fiber entry point in your home.

Step 2: Choose a Compatible Router

Ensure your new router supports fiber connections. Look for a WAN port or an SFP port labeled for fiber or ONT input. Some ISPs may have specific compatibility requirements, so check with them before purchasing.

Step 3: Connect the Hardware

- **Fiber to ONT:** Plug the fiber optic cable into the ONT's optical port, handling the connector carefully to avoid damage.
- **ONT to Router:** Use an Ethernet cable to connect the ONT's LAN/Ethernet port to the router's WAN port.
- **Power On:** Plug in the ONT first, wait for the status lights to stabilize, then power on your router.

Step 4: Configure the Router
