

How to best match a router with fiber optic cable

Summary of Content

You cannot connect a fiber optic cable directly to a standard router; you need an Optical Network Terminal (ONT) to convert the optical signal to Ethernet, which then connects to your router.

Step 1: Check Compatibility

Not all routers can handle fiber optic input directly. Look for a fiber-ready router with an SFP, PON, or WAN port labeled for fiber or ONT connection. If your router lacks this, you will need a media converter or an ONT provided by your ISP to bridge the fiber signal to Ethernet .

Step 2: Gather Necessary Equipment

- Fiber optic cable: Usually single-mode with SC/APC or SC/UPC connectors.
- Optical Network Terminal (ONT): Converts light signals from the fiber into electrical signals for your router.
- Ethernet cable: To connect the ONT to the router's WAN port.
- Power adapters: For both the ONT and router .

Step 3: Install the ONT

- Locate the fiber wall outlet where the ISP's fiber line enters your home.
