

How to configure ports on a TP-Link fiber optic switch

Overview

Whether you're setting it up for a home lab, office, or enterprise use, this guide walks you through everything from the initial setup to VLAN configuration, port settings, and security features. □□ What you'll learn in this video: Initial login and Web UI overview Setting. If you want to access the switch via a specified port (hereafter referred to as the access port), you can configure the port as a routed port and specify its IP address, or configure the IP address of the VLAN which the access port belongs to. If you have an earlier version, please check out our FAQs here: [TP-Link FAQs Switch Port configurations have moved in Omada Controller V6 from Wired & Wireless Networks > LAN to their own dedicated Port Profile](#). The switch supports the following features about physical interfaces: You can configure port status, speed mode, duplex mode, flow control and other basic parameters for ports. The nice thing about using these ports is that you do not have to use up any of your Ethernet connections. This function allows the switch to forward packet copies of the monitored ports to a specific monitoring port.
