

How to connect a 1-to-4 fiber optic cable to a router

Summary of Content

To connect a 1-to-4 fiber optic cable to a router, use an Optical Network Terminal (ONT) or fiber splitter to convert the optical signals to Ethernet, then connect each output to your router or network switch.

Required Equipment

- Optical Network Terminal (ONT): Converts fiber optic signals into electrical signals compatible with routers .
- Fiber optic splitter (1-to-4): If your ISP provides a single fiber line that needs to feed multiple outputs, a splitter divides the signal into four separate fibers .
- Fiber optic patch cables: To connect the splitter outputs to the ONT or directly to fiber-ready router ports .
- Router or network switch: Ensure it has enough WAN or SFP ports to handle multiple connections .
- Ethernet cables (Cat6a or higher): To link the ONT outputs to the router or switch for network distribution .

Step-by-Step Connection

- Install the ONT
- Locate the fiber wall outlet from your ISP.
- Connect the incoming fiber cable to the ONT's optical input port.
- Power on the ONT and wait for the status lights to stabilize .
