

How to connect a Huawei fiber optic router

LoRawan outdoor base station

Summary of Content

To connect a Huawei fiber optic router, link the optical fiber to the router, connect your devices via Ethernet or Wi-Fi, and configure Internet settings through the router's web interface.

Physical Connection

-

Connect the Optical Fiber: Insert one end of the optical fiber cable into the router's optical interface and the other end into the optical distribution frame (ODF) or the upstream device's optical interface. Ensure you use the correct fiber type: single-mode fibers for single-mode modules, multimode fibers for multimode modules, and follow the Tx/Rx channel requirements for PON modules ().

-

Power the Router: Plug the router into a power source and wait for the indicators to stabilize. For Huawei Wi-Fi Mesh systems, secondary routers will automatically network with the main router once powered ().

-

Connect Devices: You can connect computers, set-top boxes, or other wired devices to the router's LAN ports using Ethernet cables. Wireless devices such as phones, tablets, and laptops can connect to the router's default Wi-Fi network, which is printed on the router's nameplate ().
