

How to connect a fiber optic module for broadband internet access

Summary of Content

To connect a fiber optic module for broadband, you need an Optical Network Terminal (ONT) to convert light signals into electrical signals, then link it to a compatible router using an Ethernet cable.

Required Components

- Optical Network Terminal (ONT): Converts incoming fiber optic signals into electrical signals your router can use, typically provided by your ISP .
- Fiber Optic Cable: Usually single-mode with SC/APC or SC/UPC connectors, connecting the wall outlet to the ONT .
- Fiber-Ready Router: Ensure it supports gigabit speeds or higher to fully utilize fiber performance .
- Ethernet Cable (Cat6a or higher): Connects the ONT to the router's WAN port .

Step-by-Step Connection Process

- Locate the Fiber Wall Outlet: Identify where the ISP's fiber line enters your home or office .
- Install the ONT: Place the ONT within 3 meters of the fiber entry point to minimize signal loss . Connect the fiber optic cable from the wall outlet to the ONT's optical port, handling the connector carefully to avoid dirt or damage .
- Power On the ONT: Use the provided power adapter and wait 2-5 minutes for the status lights to stabilize .
