

How to connect a light bulb to a distribution box

Summary of Content

To connect a light bulb to a distribution box, you need to safely route power from the box through a junction box to the bulb, using proper wire connections and a switch for control.

Step 1: Safety First

Always turn off the main power at the circuit breaker before starting any electrical work to prevent shock or injury. Use insulated tools and verify that the circuit is de-energized with a multimeter before touching any wires .

Step 2: Prepare the Distribution Box

A distribution box (or electrical distribution board) distributes electricity to various circuits. Identify the incoming live (brown or red) and neutral (blue or black) wires. Install the appropriate circuit breaker for the lighting circuit and connect the incoming wires to the main terminals .

Step 3: Run Wires to a Junction Box

From the distribution box, run cables to a junction box near the light fixture. The junction box serves as a central hub for connecting wires safely. Strip the insulation from the ends of the wires to expose the conductors .

Step 4: Connect the Wires

Inside the junction box:
