

How to connect a new 100Mbps fiber optic cable to a router

Summary of Content

To connect a router to a 100Mbps fiber optic connection, you need an Optical Network Terminal (ONT) to convert the fiber signal, then link it to your router via Ethernet.

Required Equipment

- Optical Network Terminal (ONT): Provided by your ISP, converts optical signals to electrical signals compatible with your router .
- Fiber optic cable: Usually single-mode with SC/APC or SC/UPC connectors .
- Ethernet cable: Cat5e or Cat6 recommended to maintain 100Mbps speeds .
- Router: Ensure it supports at least 100Mbps WAN speeds and has a WAN/Internet port .

Step-by-Step Connection

- Install the ONT
- Locate the fiber wall outlet where your ISP's fiber line enters your home.
- Connect the fiber optic cable from the wall outlet to the ONT's optical input port. Handle the fiber carefully to avoid bending or damaging it .
- Power on the ONT and wait for the status lights to stabilize (usually 2-5 minutes), .
