

# How to connect outdoor fiber optic cables and network cables

## Summary of Content

To connect outdoor network cables and fiber optic cables, use fiber-to-Ethernet media converters, proper outdoor-rated fiber cables, and follow best practices for splicing and environmental protection.

### Choosing the Right Cables

For outdoor installations, select fiber optic cables designed for harsh environments, which are resistant to moisture, UV radiation, temperature fluctuations, and mechanical stress . Avoid cables with metal sheaths if electrical isolation is required, as metal can transmit surges . Outdoor Ethernet cables (Cat 6a or Cat 8) should be rated for UV and water resistance if exposed to the elements.

### Converting Between Copper and Fiber

To connect standard Ethernet devices to fiber, use fiber-to-Ethernet media converters. These devices convert electrical signals from copper Ethernet cables to optical signals for fiber and vice versa, providing electrical isolation and extending transmission distance beyond the 100-meter limit of copper cables . For higher speeds, 10 Gbps SFP+ transceivers can be used with fiber switches to create custom media converters.

### Fiber Splicing and Connectorization

Proper fiber connection is critical to minimize signal loss. Use either fusion splicing or connector kits:
