

How to connect the fiber optic cable to the router port

Summary of Content

You connect a fiber optic cable to your router by first linking it to an Optical Network Terminal (ONT) and then connecting the ONT to your router via an Ethernet cable.

Step 1: Gather Necessary Equipment

- Fiber optic cable: Usually a thin yellow cable with SC/APC or SC/UPC connectors.
- Optical Network Terminal (ONT): Converts the fiber's light signals into electrical signals your router can use, typically provided by your ISP.
- Router: Ensure it has a WAN port or SFP/PON port compatible with fiber input.
- Ethernet cable: To connect the ONT to the router .

Step 2: Install the ONT

- Locate the fiber optic wall outlet where the ISP's fiber line enters your home.
- Connect the fiber optic cable from the wall outlet to the ONT's optical port. Handle the connector carefully, avoiding dirt or damage, and remove protective caps before insertion .
- Power on the ONT and wait for the status lights to stabilize, which may take a few minutes .

Step 3: Connect the ONT to the Router
