

# How to connect the network cable to the fiber optic router port

## Summary of Content

To connect a fiber optic router to a network cable port, you need to use an Optical Network Terminal (ONT) to convert the fiber signal to Ethernet, then link it to your router's WAN port.

### Step 1: Gather Necessary Equipment

- Optical Network Terminal (ONT): Provided by your ISP, this device converts the fiber optic signal into an electrical signal compatible with standard networking equipment .
- Fiber optic cable: Usually pre-terminated with SC/APC or SC/UPC connectors, supplied by your ISP .
- Router: Ensure it has a WAN or Internet port to receive the Ethernet connection.
- Ethernet cable (Cat5e or higher): Connects the ONT to the router .

### Step 2: Connect the Fiber Optic Cable to the ONT

- Locate the fiber optic wall outlet or termination point installed by your ISP.
- Remove protective caps from both the fiber cable and the ONT port.
- Carefully insert the fiber cable into the ONT's optical port, aligning the connector properly until it clicks into place .
- Power on the ONT and wait for the status lights to stabilize, indicating a successful connection .

### Step 3: Connect the ONT to Your Router
