

How to connect the serial wires in the distribution box

Summary of Content

Use a daisy-chain topology with twisted pair cables, connecting A+, B-, and GND terminals sequentially through a 3-pin terminal block for reliable serial communication.

Step-by-Step Method

1. Choose the Right Cable: For RS-485 serial communication, use a twisted pair cable to reduce electromagnetic interference. Include a third conductor for ground reference (GND) if required (). 2. Terminal Block Setup: Install a 3-pin terminal block inside the distribution box. Label the terminals as A+ (positive), B- (negative), and GND. This allows easy connection of multiple devices in sequence (). 3. Daisy-Chain Topology: Connect devices sequentially:

- A+ from the upstream device → local A+ terminal → downstream device A+
- B- from the upstream device → local B- terminal → downstream device B-
