

How to cover a cable tray with a cable tray

Summary of Content

Covering a cable tray involves selecting the right type of cover and material to protect cables, ensure safety, and maintain system aesthetics.

Choosing the Right Cable Tray Cover

Cable tray covers, also called lidding, are designed to enclose the top of a cable tray, protecting cables from dust, debris, moisture, and accidental contact while improving safety and aesthetics. The first step is to assess the environment where the tray is installed:

- High-traffic areas: Use sturdy covers to prevent accidental contact and reduce the risk of electric shock.
- Industrial or corrosive environments: Choose corrosion-resistant materials like stainless steel, aluminum, or fiberglass.
- Aesthetic-sensitive spaces: Smooth, flat, or dome-shaped covers can enhance visual appeal while keeping cables organized.

Types of Cable Tray Covers

- Dome or Hat-Shaped Covers: Ideal for trays where cables extend beyond the tray edges; they can have flat or corrugated tops.
- Flat Covers: Provide a simple, low-profile solution suitable for most office or indoor applications.
