

How to enable PoE on a PoE switch

Summary of Content

PoE is usually enabled by default on Cisco PoE-capable switches, but it can be manually configured using the power inline commands in interface configuration mode.

Default Behavior

Most Cisco PoE switches automatically detect powered devices (PDs) such as IP phones, wireless access points, or IP cameras and supply power if the switch's PoE budget allows. The switch uses protocols like CDP (Cisco Discovery Protocol) or LLDP-MED to negotiate power requirements with connected devices . Non-CDP/LLDP devices may require manual configuration to ensure proper power allocation .

Enabling PoE via CLI

To manually enable PoE on a Cisco switch:

- Connect to the switch via console or SSH.
- Enter privileged EXEC mode:

```
switch> enable
```

- Enter global configuration mode:

```
switch# configure terminal
```

- Select the interface or range of interfaces where PoE should be enabled:

```
switch(config)# interface GigabitEthernet1/0/1
```
