

How to install waterproof protection on the distribution box

Summary of Content

Proper waterproofing of a distribution box involves selecting a suitable enclosure, sealing cable entries, applying gaskets or sealants, and ensuring secure mounting to prevent moisture ingress.

Step 1: Choose the Right Distribution Box

Select a waterproof enclosure rated at least IP65 or IP66, made from moisture-resistant materials such as polycarbonate, aluminum, or stainless steel . Ensure the box has pre-molded knockout holes for cable entry and a robust lid with high-grade gaskets to maintain a continuous seal .

Step 2: Prepare the Installation Site

- Assess the structural integrity of the mounting surface.
- Avoid locations near water sources, direct sunlight, or areas prone to pooling water .
- Ensure good ventilation to prevent condensation inside the box .

Step 3: Mount the Box Securely

- Drill mounting holes according to the manufacturer's template and use expansion bolts with rubber sealing washers .
- Ensure the box is level and slightly elevated from the ground to promote water runoff .
