

How to lay Dominic flooring

Summary of Content

Laying Dominic flooring involves careful preparation, acclimation, underlayment installation, and precise plank placement to ensure a durable, professional finish.

Preparation

- Clear the Area: Remove all furniture, personal items, and decorations from the room. Empty closets and cabinets to allow full access to the floor area .
- Check Subfloor: Ensure the subfloor is clean, dry, and level. Uneven surfaces can cause gaps or buckling, so sand or level as needed .
- Acclimate Flooring: Let the Dominic flooring planks sit in the room for 48-72 hours to adjust to temperature and humidity, preventing expansion or contraction after installation .

Tools and Materials

- Tape measure, pencil, and chalk line
- Spacers for expansion gaps
- Saw for cutting planks
- Rubber mallet and tapping block
- Underlayment (if required for soundproofing or moisture barrier)

Installation Steps

- Lay Underlayment: Roll out the underlayment across the subfloor, ensuring seams are taped and edges are flush .
