

How to plug a fiber optic cable into a router

Summary of Content

You cannot plug a fiber optic cable directly into a standard router; it must first connect to an Optical Network Terminal (ONT), which converts the optical signal into an Ethernet signal for the router.

Step 1: Gather Necessary Equipment

- Fiber optic cable: Usually single-mode with SC/APC or SC/UPC connectors. Handle carefully to avoid dirt or damage.
- Optical Network Terminal (ONT): Provided by your ISP, converts light signals to electrical signals.
- Router: Ensure it has a WAN or fiber-compatible port.
- Ethernet cable: To connect the ONT to the router .

Step 2: Connect Fiber to the ONT

- Locate the fiber wall outlet where the ISP's line enters your home.
- Remove protective caps from both the fiber cable and the ONT port.
- Align the connector using its key or tab and gently push it into the ONT's optical port until it clicks securely. Avoid bending the cable sharply .
- Power on the ONT and wait 2-5 minutes for the status lights to stabilize, indicating a successful connection to the ISP network .

Step 3: Connect the ONT to the Router
