

How to splice fiber optic cables with FC interfaces

Summary of Content

Splicing FC fiber optic cables involves preparing the fiber, choosing fusion or mechanical splicing, and carefully aligning the fibers to ensure low-loss, reliable connections.

Step 1: Gather Tools and Materials

To splice FC fiber optic cables, you will need:

- Fiber optic cleaver for precise end preparation
- Fusion splicer (preferred for permanent, low-loss splices) or mechanical splice kit
- Fiber stripper to remove protective coatings
- FC pigtails if connecting to pre-terminated equipment
- Cleaning supplies (isopropyl alcohol, lint-free wipes)
- Splice protectors or heat-shrink sleeves for fusion splices .

Step 2: Prepare the Fiber

- Strip the outer jacket of the fiber cable carefully to expose the bare fiber.
- Clean the fiber with alcohol to remove any debris or oils.
- Cleave the fiber using a precision cleaver to create a flat, smooth end. Proper cleaving is critical for low-loss splicing .
