

How to use a Canadian fiber optic switch

Summary of Content

To use a Canadian fiber optic switch, connect the fiber cable to your modem or Optical Network Terminal (ONT), power it on, wait for activation, and then configure your Wi-Fi network.

Step 1: Locate the Fiber Jack or ONT

First, identify the fiber jack or Optical Network Terminal (ONT) installed in your home. This is usually near your electrical panel or in a central location. The fiber cable will have a green connector, which should always be handled carefully and pointed toward the ground to avoid damage or injury .

Step 2: Connect the Fiber Cable

- Remove the green connector from the existing cable attached to your modem or ONT.
- Insert the green end of the fiber cable into the corresponding port on your new modem or ONT, ensuring correct orientation .
- Avoid bending the fiber cable sharply, as this can affect signal quality.

Step 3: Power On and Activate

- Connect the power cord to your modem or ONT and plug it into an electrical outlet.
- Wait for the device to activate, which may take up to 15 minutes. You will see three solid white lights when the modem is ready .
