

Huawei OLT optical module incompatible

Overview

The optical module is faulty or not securely installed. If the transmit optical power is abnormal, replace the optical. These protocols are incompatible by default because Cisco's PVST+ uses a proprietary BPDU format (destination MAC 01-00-0C-CC-CC-CD), which Huawei devices do not natively understand. To resolve this, you can either configure both sides to use a standard protocol like RSTP or MSTP, or configure the. The service data is marked with sequence numbers on the ONU PON MAC module and is duplicated in two copies. The ONU forwards the service data to the active OLT and the standby OLT at the same time through the PON 1 upstream port (active port) and the PON 2 upstream port (standby port). The active. Check for the possible causes on the OLT and troubleshoot the faults accordingly. Typical error/status messages you may encounter include: Run state: offline Reason of Offline: Insufficient ONT.
