

Huijue PoE Switch IP

Summary of Content

Huijue PoE switches typically use a default IP of 192.168.0.1, but if connected to a network with DHCP, the switch may receive a different IP from the DHCP server.

Default IP Address

Most Huijue PoE switches come with a default static IP of 192.168.0.1. You can use this IP to access the switch's web interface directly if your computer is on the same subnet (e.g., 192.168.0.x) . If your network uses a different subnet, you may need to temporarily set your computer's IP to match the switch's subnet to access it.

DHCP-Assigned IP

If the switch is connected to a network with a DHCP server, it will automatically request an IP address from the server. You can find the assigned IP by:

- Logging into your router or DHCP server and checking the list of connected clients.
- Using network scanning tools (like arp -a or Advanced IP Scanner) to detect the switch on your network .

Accessing the Switch

Once you know the IP:

- Open a web browser and enter the switch's IP to access the web management interface.
- Alternatively, you can use CLI access via console or SSH if supported by the switch.
