

Indoor distribution box with four circuits

Summary of Content

A 4-circuit indoor distribution box is a compact electrical panel designed to safely distribute power to four separate circuits, typically featuring DIN rails, circuit breakers, and protective enclosures.

Overview

An indoor 4-circuit distribution box, also known as a breaker box or panel, is used to safely manage and distribute electricity within a building. It allows you to connect up to four separate circuits, each protected by its own miniature circuit breaker (MCB), ensuring safety against overloads and short circuits .

Key Features

- **Material and Construction:** Most indoor boxes are made from ABS or PC plastic or metal, providing durability and electrical insulation . Some models include transparent covers for easy inspection.
- **DIN Rail and Terminals:** Equipped with DIN rails for mounting MCBs and copper bus bars for secure connections .
- **IP Rating:** Indoor boxes typically have IP20 to IP66 ratings, protecting against dust and accidental contact, with higher ratings suitable for damp environments .
- **Mounting:** Designed for wall mounting, with pre-drilled holes for easy installation. Some models allow both surface and flush mounting .
- **Applications:** Suitable for residential, workshop, office, or small commercial installations, and can also be used for solar energy connections or EV charging setups
