

Installation Solution for Monaco Server Rack DC Power Distribution Unit IP54

Summary of Content

Install your Monaco DC PDU in a server rack using vertical or horizontal mounting, ensuring IP54 compliance, proper cable management, and secure electrical connections.

Mounting Orientation and Rack Compatibility

Monaco DC PDUs, like other rack-mounted units, can typically be installed vertically (Zero-U) or horizontally (1U/2U) depending on rack space and outlet accessibility . Ensure the rack is compatible with 19-inch mounting standards and can support the PDU's weight. For IP54-rated units, maintain adequate clearance around the PDU to prevent obstruction of airflow and to preserve dust and splash protection .

Installation Steps

- Position the PDU: Align the PDU with the rack mounting holes. Vertical mounting is preferred for space-saving, while horizontal mounting may be used for easier access to outlets .
- Secure the PDU: Use the supplied mounting brackets or screws. Tool-less designs are common, but ensure all fasteners are tight to prevent vibration or movement .
- Connect the Input Power: Attach the DC input cable to the PDU's input terminals. Verify correct polarity and voltage rating to avoid damage .
- Distribute Power to Devices: Connect servers and network devices to the PDU outlets. Use IEC C13/C19 or compatible connectors as required .
