

Installation of Nordic Smart Power Distribution Cabinet

Overview

Step 1: Drill Ø132 mm wall opening. Electrical Connection Power supply: 230V AC, 50Hz. Scan/Click the QR code below to download the datasheet. The Power Distribution Module is a key component of the smart cabinet system, serving as the interface between the main power supply and the equipment installed within the row. Integrated into the smart structure and connected with the UPS. Installation must be performed by qualified personnel. Step 6: Test system. Norway Smart Power Distribution Cabinet Overview We deliver custom equipped or non-equipped outdoor cabinets for energy management systems. Based on customers requirements, they can be equipped with metering systems (smart meters) and/or various sensors and sensorhubs to help improve service. GARO is launching a new generation of low-voltage distribution cabinets. A complete system solution up to 400A, developed in accordance with EBR industry guidelines and adapted to Nordic conditions – featuring a robust construction in Magnelis®, a revolutionary metallic coating with C5 corrosion. pressing SELECT button. Current available outputs are plug 1, 5 and 8. Its compact design offers flexibility for expansion and quick deployment, making it ideal for environments such as enterprise branches, hospitals, schools, financial.
