

Installation of Waterproof Distribution Box Accessories

Summary of Content

Proper installation of waterproof distribution box accessories ensures long-term protection against moisture, dust, and environmental stress, maintaining electrical safety and system reliability.

Site Preparation and Box Selection

Select a distribution box model suitable for the application, considering IP rating (IP65–IP66 for outdoor use), material, and environmental conditions such as UV exposure, coastal salt spray, or industrial dust . Inspect the box for damage, rust, or missing components before installation . Ensure the mounting surface is structurally sound and capable of supporting the box and internal components with a safety margin .

Mounting and Fixing

- **Brackets and Bolts:** Install a strong fixing bracket or pedestal according to design requirements. Use stainless steel fasteners (316L for coastal areas) to prevent corrosion .
- **Leveling and Alignment:** Drill mounting holes using the manufacturer's template, ensuring precise leveling. Expansion bolts with rubber sealing washers are recommended for outdoor installations .
- **Positioning:** Maintain adequate clearance for door operation and internal access. Wall mounting is suitable for light to medium boxes, while pedestals or skid mounts are preferred for heavy switchgear .
