

Installation of a 5-Door Waterproof Distribution Box

Summary of Content

Proper installation of a 5-door waterproof distribution box ensures protection against water, dust, and mechanical impacts while maintaining system reliability.

Site Selection and Preparation

Choose a location that is dry, well-ventilated, and away from direct water sources or excessive sunlight. For outdoor installations, ensure the mounting surface is structurally sound, such as concrete or reinforced steel, and can support the weight of the box and internal components. Maintain accessibility for maintenance and future upgrades.

Mounting the Box

- Mark and drill mounting holes using the manufacturer's template, ensuring the box is level.
- Install fixing brackets or backplates if required, using expansion bolts with rubber sealing washers to prevent water ingress.
- Secure the box to the brackets or directly to the wall, leaving a small clearance from the ground (typically 1.5 meters for residential or adjusted for industrial setups).

Cable Entry and Sealing

- Pierce pre-molded knockout holes at the bottom or sides for cable entry.
