

Instructions for Use of Temperature-Controlled Rack-Mounted Server Cabinets

Summary of Content

Proper installation, airflow management, and active cooling are essential to maintain safe operating temperatures in rack-mounted server cabinets.

Installation Guidelines

- **Rack Preparation:** Ensure the rack is stable and level. Use the provided slide rails to mount servers, aligning tabs with the server inserts and securing both front and rear flanges (). Cage nuts are optional, and 5.5 mm flat-head screws can be used for taped-hole racks.
- **Slide Rail Setup:** Extend slide rails fully, lock them in place, and carefully lower the server onto the rails. Confirm that each tab is properly seated to prevent equipment sag or misalignment ().
- **Spacing Considerations:** Leave at least 1U of space between devices when possible and maintain 4–6 inches of clearance at the front and back of the rack to support airflow ().

Cooling and Temperature Management

- **Passive Cooling:** Utilize natural convection by ensuring perforated doors and leaving 20–30% of rack space empty. Avoid blocking ventilation holes with cables or equipment ().
