

Irregularly Shaped Cable Tray Connector

Summary of Content

Irregularly shaped cable tray connectors are specialized fittings designed to join, bend, or adapt cable trays in non-standard configurations, ensuring secure and flexible cable management.

Overview

Irregularly shaped cable tray connectors are used when cable trays need to navigate curves, slopes, tees, or custom angles that cannot be accommodated by straight connectors. They are essential for maintaining the structural integrity of the tray system while allowing cables to follow complex routing paths . These connectors are often referred to as fittings or accessories and include elbows, bends, tees, crosses, risers, reducers, and custom plates .

Materials and Construction

These connectors are typically made from galvanized steel, stainless steel, aluminum alloy, or fiberglass-reinforced plastic (FRP), providing durability and corrosion resistance in various environments . Zinc-plated or stainless steel options are common for industrial or outdoor applications due to their resistance to corrosion and mechanical stress .

Types and Functions

- Elbows and Bends: Allow the tray to change direction smoothly, accommodating 45° or 90° turns.
- Tees and Crosses: Enable branching of cable trays to multiple directions.
