

Is a 100Mbps or 1Gbps router better for a 100Mbps fiber optic connection

Overview

Mbps stands for megabits per second, while Gbps stands for gigabits per second. The key thing to know is that one gigabit is equal to 1,000 megabits. So, a 1 Gig (or 1 Gbps) connection is 10 times faster than a 100 Mbps connection. Megabytes (MB) measures the amount of data you use. This conversion helps you estimate if a Gigabit internet and faster is best for running a public web server, transferring large files to and from a remote network, or livestreaming gameplay to Twitch. So, what's the difference between mega bits and giga bits?

Which internet speed is faster than the other?

We'll break down the technical. Choose your speed based on your daily habits: A 100 Mbps plan is a great fit for most households, handling everyday streaming and remote work with ease, while a 1 Gig plan is built for power users, content creators, and large families with many connected devices. 300-500 Mbps is suitable for most.
