

Jungle Fiber Optic Cable

Overview

This is a black bulk 1000 foot spool of indoor/outdoor rated fiber optic distribution cable intended for large installations of short range runs at 10 Gigabit speeds. It is composed of 6 multimode fibers (50 micron core) inside a water blocking Aramid yarn wrapped in a black PVC. Fibre optic cables are network cables made of glass filaments that can transmit data speeds and bandwidths significantly better than tradition cables made of copper. These glass filaments have a reflective outer coating, allowing the light pulses to bounce from side to side. In turn, this allows. jungle is land covered with dense forest and tangled vegetation, usually in tropical climates. Application of the term has varied greatly during the past century. Fiber optic wires emit holographic cyan and magenta light, while. This visualization tracks the historical evolution of the undersea cable network, global internet peering capacity, and IP allocation dynamics over time. IXP and Peering facility data is provided by PeeringDB.
