

# Lc fiber optic adapter parameters

## Summary of Content

LC fiber optic adapters are compact, high-density connectors designed to align and mate LC connectors with low insertion loss, available in single-mode and multimode, simplex or duplex configurations.

### Key Specifications

**Ferrule and Sleeve:** LC adapters use 1.25 mm ferrules to align fibers. Sleeve materials vary: zirconia ceramic for single-mode adapters (especially APC types) and phosphor bronze for multimode adapters, providing precise alignment and durability .  
**Hybrid adapters** are also available to connect different fiber types. **Insertion Loss:** Typical insertion loss is  $\leq 0.1$  dB per adapter, ensuring minimal signal degradation . This is critical for high-speed networks and long-distance links. **Modes and Configurations:**

- Single-mode (SM) and multimode (MM) options.
- Simplex (single fiber) or duplex (two fibers in one footprint) versions .
- Color-coded housings for easy identification of fiber type and mode. **Mounting and Housing:**
- Adapters can be snap-in, screw-mount, or panel-mounted, depending on installation requirements .
- Housings are available in plastic or metal, with metal providing EMI protection and enhanced durability .
