

List of Production Equipment for Power Distribution Boxes

Summary of Content

Power distribution box production equipment includes automated forming, cutting, bending, punching, and surface treatment machines designed for efficient, high-precision manufacturing.

Production Line Overview

Modern production lines for power distribution boxes are highly automated and designed to handle various enclosure sizes and materials. A typical line includes:

- **Uncoiler and Straightening Machines:** Raw steel or stainless steel coils are loaded onto an uncoiler, then straightened and tensioned for processing .
- **Servo Feeders and Hydraulic Devices:** These guide the material into forming machines with precise control over speed and positioning .
- **Roll Forming and Bending Machines:** The sheet metal is shaped into box panels, with bending devices forming sides, tops, and bottoms according to specifications .
- **Punching and Drilling Equipment:** CNC punching systems create holes for circuit breakers, switches, and cable entries, ensuring high accuracy .
- **Cutting Machines:** Laser or plasma cutters are used for precise cutting of metal sheets into required shapes .

Surface Treatment and Finishing

After forming, enclosures undergo surface treatment to enhance durability and corrosion resistance:
