

Low-filtration distribution box fan

Overview

Box-type Fans use an enclosed cabinet structure to lower noise, stabilize airflow, and support optional filtration for cleaner ventilation. These units offer steady performance with low vibration, making them well-suited for workshops, offices, HVAC systems, and general building. Also known as a Corsi-Rosenthal box, this DIY method of building your own air filter with MERV13 furnace filters and a box fan are an easy and cost-effective way to help clear indoor air from airborne virus particles, wildfire smoke, pollen, dust, and more! If you can seal a box, you can build one. Titus offers a complete line of fan filter diffusers that can be used for new design or retrofitting cleanroom environments. Each Titus Fan Filter Diffuser is a self-contained fan filter module that includes HEPA filter, pre-filter, fan speed control and low profile design. Air circulation is. They protect equipment in enclosures and cabinets from heat.
